Trojan planets

The Trojan planets are named for Greek and Trojan heroes of the Trojan War. The Greeks, which are marked by an asterisk, move around the Lagrange libration point L4 of Jupiter, the Trojans around L5. There are, unfortunately, some errors concerning the assignment of Homer's heroes to the correct class. Astronomers interpret those warriors as being "spies" in the enemies' camp.

(5261) Eureka is a "Trojan" orbiting around L5 of Mars.
